Power

Our Lady of the Assumption Catholic Primary School

Power Maths calculation policy, Year 2

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

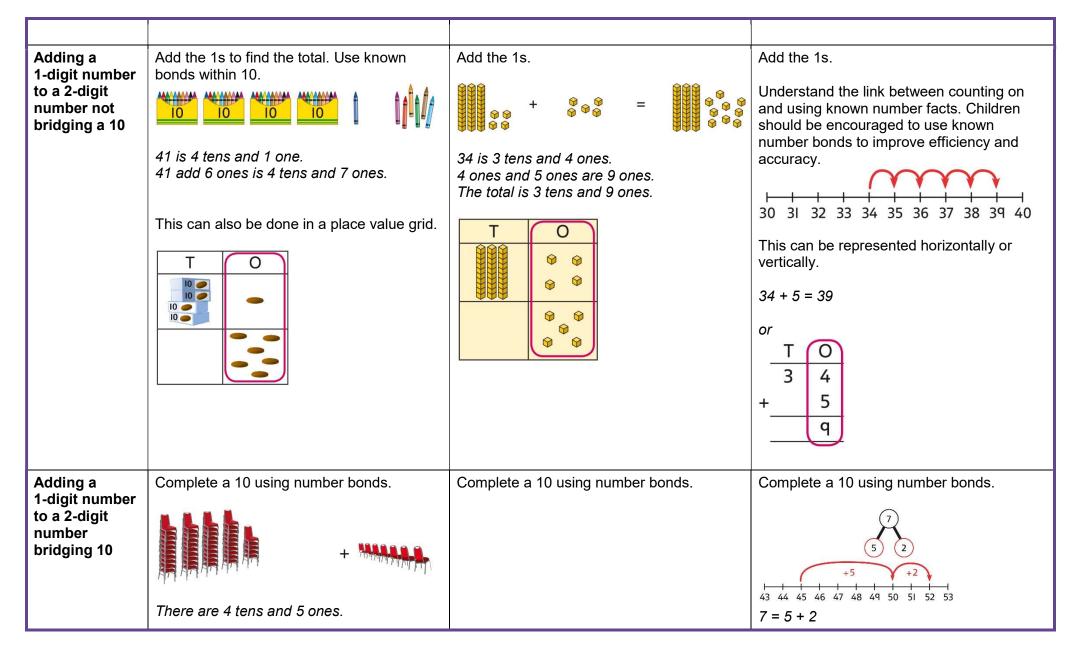

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with 15 – 3 and 15 – 13, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods. In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.	to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations. Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.	Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.
---	--	---

	Year 2			
	Concrete	Pictorial	Abstract	
Year 2 Addition				
Understanding 10s and 1s	Group objects into 10s and 1s.	Understand 10s and 1s equipment, and link with visual representations on ten frames.	Represent numbers on a place value grid, using equipment or numerals. Tens 0nes 3 2 Tens 0nes 4 3	
Adding 10s	Use known bonds and unitising to add 10s. Use known bonds and unitising to add 10s. interpretation 0 interpretation 0 int	Use known bonds and unitising to add 10s. $ \begin{array}{c} \bullet & \bullet \\ \bullet &$	Use known bonds and unitising to add 10s. 7 4 3 4 + 3 = 1 4 + 3 = 7 $4 \tan 3 = 7$ $4 \tan 3 = 7$	

	I need to add 7. I will use 5 to complete a 10, then add 2 more.		45 + 5 + 2 = 52
Adding a 1-digit number to a 2-digit number using exchange	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten. $ \begin{array}{r} \hline 0 \\ 2 \\ 4 \\ + \\ \hline 2 \\ 1 \\ \hline 1 \\ \hline 0 \\ 2 \\ 4 \\ 8 \\ 3 \\ 2 \\ 1 \\ \hline 1 \\ \hline \end{array} $
Adding a multiple of 10 to a 2-digit number	Add the 10s and then recombine.Image: Constraint of the second sec	Add the 10s and then recombine. Add the 10s and then recombine. + + + + + + + +	Add the 10s and then recombine. 37 + 20 = ? 30 + 20 = 50 50 + 7 = 57 37 + 20 = 57

		A 100 square can support this understanding. $\begin{bmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ 11 & 12 & 13 & 14 & 15 & 16 & 7 & 18 & 19 & 20 \\ 21 & 22 & 23 & 24 & 25 & 26 & 27 & 28 & 29 & 30 \\ 31 & 32 & 33 & 34 & 35 & 36 & 37 & 38 & 34 & 40 \\ 41 & 42 & 43 & 44 & 45 & 46 & 47 & 48 & 49 & 50 \\ 51 & 52 & 53 & 54 & 55 & 56 & 57 & 58 & 59 & 60 \\ 61 & 62 & 63 & 64 & 65 & 66 & 67 & 68 & 69 & 70 \\ 71 & 72 & 73 & 74 & 75 & 76 & 77 & 78 & 79 & 80 \\ 81 & 82 & 83 & 84 & 85 & 86 & 87 & 88 & 90 \\ 91 & 92 & 93 & 94 & 95 & 96 & 67 & 98 & 99 & 100 \end{bmatrix}$	
Adding a multiple of 10 to a 2-digit number using columns	Add the 10s using a place value grid to support. TOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOO	Add the 10s using a place value grid to support. TO O O O O O O O O O O O O O O O O O O	Add the 10s represented vertically. Children must understand how the method relates to unitising of 10s and place value. $\begin{array}{r} \hline T & O \\ \hline I & 6 \\ + & 3 \\ \hline 4 & 6 \end{array}$ $1 + 3 = 4$ $1 ten + 3 tens = 4 tens$ $16 + 30 = 46$
Adding two 2-digit numbers	Add the 10s and 1s separately.	Add the 10s and 1s separately. Use a part-whole model to support.	Add the 10s and the 1s separately, bridging 10s where required. A number line can support the calculations. $\frac{+10}{17} + \frac{10}{17} + \frac{1}{17} + \frac{1}{2} + $

Power

Power Maths calculation policy

	5 + 3 = 8 There are 8 ones in total. 3 + 2 = 5 There are 5 tens in total. 35 + 23 = 58	32 + 11 $11 = 10 + 1$ $32 + 10 = 42$ $42 + 1 = 43$ $32 + 11 = 43$	17 + 25
Adding two 2-digit numbers using a place value grid	Add the 1s. Then add the 10s.		Add the 1s. Then add the 10s. $T \bigcirc 3 2 + 1 4 - 6 = -$
Adding two 2-digit numbers with exchange	Add the 1s. Exchange 10 ones for a ten. Then add the 10s.		Add the 1s. Exchange 10 ones for a ten. Then add the 10s.

	Tens Ones $9 9 9 9 9 9 9 9 9 9 9 9 9 9 9 9 9 9 9$		$ \begin{array}{r} T \\ T \\ + 2 \\ + 2 \\ - 5 \\ - \\ T \\ - \\ T \\ - $
Year 2 Subtraction			
Subtracting multiples of 10	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.
	Q Q X X X X X X X	100 30	7 70 70 2 5 20 50
	8 subtract 6 is 2. So, 8 tens subtract 6 tens is 2 tens.	10 − 3 = 7 So, 10 tens subtract 3 tens is 7 tens.	7 tens subtract 5 tens is 2 tens. 70 – 50 = 20
Subtracting a single-digit number	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. Understand the link between counting back and subtracting the 1s using known bonds.

Power Maths calculation policy

			T O
		T O	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
Subtracting a single-digit number bridging 10	Bridge 10 by using known bonds.	Bridge 10 by using known bonds.	Bridge 10 by using known bonds.
	35 − 6 I took away 5 counters, then 1 more.	35 − 6 First, I will subtract 5, then 1.	24 - 6 = ? 24 - 4 - 2 = ?
Subtracting a single-digit number using exchange	Exchange 1 ten for 10 ones. This may be done in or out of a place value grid.	Exchange 1 ten for 10 ones.	Exchange 1 ten for 10 ones. $T \bigcirc 12 \\ 15 \\ - \\ 7 \\ 8 \\ \hline 0 \\ 12 \\ 15 \\ - \\ 7 \\ 1 \\ 8 \\ 1 \\ 1 \\ 8 \\ 1 \\ 1 \\ 8 \\ 1 \\ 1$

Power Maths © Pearson 2019

			25 - 7 = 18
Subtracting a 2-digit number	Subtract by taking away.	Subtract the 10s and the 1s.	Subtract the 10s and the 1s.
	 000000000000000000000000000000000000	This can be represented on a 100 square. $\begin{array}{rrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrr$	This can be represented on a number line. -10 -10 -10 -10 -10 -10 -10 $-10-10$ -10 -10 $-10-10$ -10 $-10-10$ -10 $-10-10$ -10 $-10-10$ -10 $-10-10$ -10 $-10-10$ -10 -10 $-10-10$ -10
Subtracting a 2-digit number using place value and columns	Subtract the 1s. Then subtract the 10s. This may be done in or out of a place value grid. $\begin{array}{c c} \hline T & O \\ \hline & & & \\ \hline \hline & & & \\ \hline & & & \\ \hline & & & \\ \hline \hline \\ \hline & & & \\ \hline \hline \\ \hline & & & \\ \hline \hline \\ \hline \hline \\ \hline & & & \\ \hline \hline \hline \\ \hline \hline \hline \\ \hline \hline \hline \hline \hline \\ \hline \hline$	Subtract the 1s. Then subtract the 10s.	Using column subtraction, subtract the 1s. Then subtract the 10s. $\begin{array}{r} T \\ -1 \\ -1 \\ 3 \\ \hline 1 \\ 2 \\ 3 \\ 3 \end{array}$

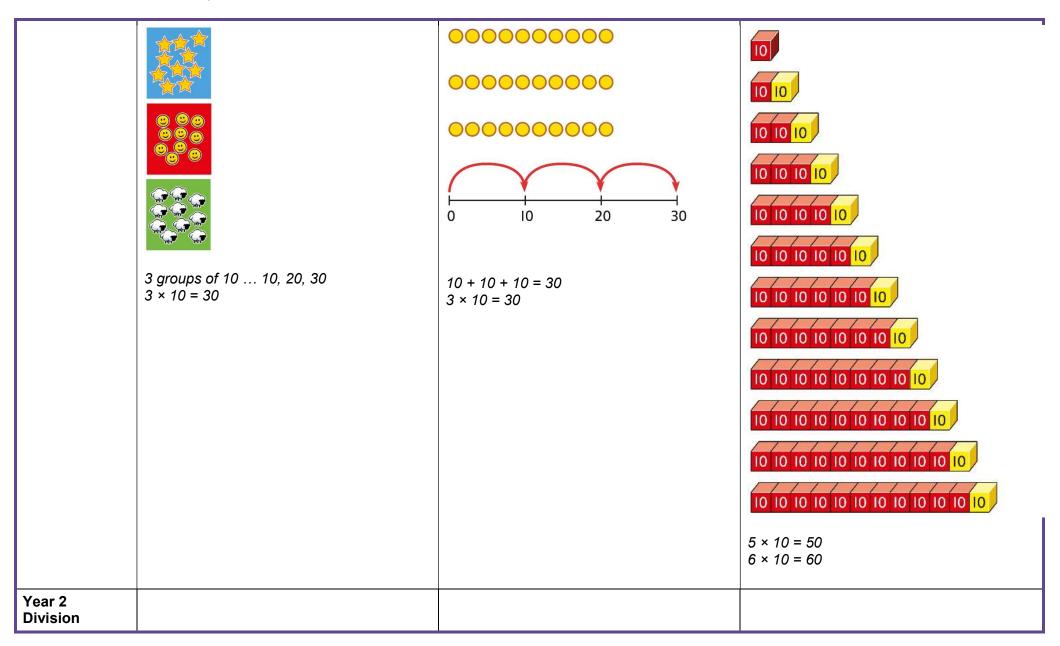

Subtracting a 2-digit number with exchange		Exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s.	Using column subtraction, exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s. $\frac{T}{4} \frac{O}{5}$ $-2 7$ $\frac{T}{-2} 7$
Year 2 Multiplication			
Equal groups and repeated addition	Recognise equal groups and write as repeated addition and as multiplication.	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication.	Use a number line and write as repeated addition and as multiplication. $\begin{array}{c} \bullet \bullet$
	3 groups of 5 chairs 15 chairs altogether	3 groups of 5 15 in total	5 + 5 + 5 = 15 3 × 5 = 15

		1	1
Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays multiplication and repeated addition. $0 5 10 15 20 2! 5 \times 5 = 25$
Understanding commutativity	<i>4 groups of 5</i> Use arrays to visualise commutativity.	<i>4 groups of 5 5 groups of 5</i> Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication.	Use arrays to visualise commutativity.
	I can see 6 groups of 3. I can see 3 groups of 6.	This is 2 groups of 6 and also 6 groups of 2.	4 + 4 + 4 + 4 + 4 = 20 5 + 5 + 5 + 5 = 20 $4 \times 5 = 20$ and $5 \times 4 = 20$
Learning ×2, ×5 and ×10 table facts	Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.	Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.	Understand how the times-tables increase and contain patterns.

Power Maths calculation policy

Power Maths © Pearson 2019

Sharing equally	Start with a whole and share into equal parts, one at a time.	Represent the objects shared into equal parts using a bar model.	Use a bar model to support understanding of the division.
Grouping equally	15 shared equally between 3. They get 5 each.Understand how to make equal groups from a whole.	Understand the relationship between grouping and the division statements.	Understand how to relate division by grouping to repeated subtraction.

	<u></u>	$12 \div 3 = 4$	
	8 divided into 4 equal groups. There are 2 in each group.	$12 \div 4 = 3$	0 1 2 3 4 5 6 7 8 9 10 11 12
		12 ÷ 6 = 2	There are 4 groups now.
		$12 \div 2 = 6$	12 divided into groups of 3. 12 \div 3 = 4
			There are 4 groups.
Using known times-tables to solve divisions	Understand the relationship between multiplication facts and division.	Link equal grouping with repeated subtraction and known times-table facts to support division.	Relate times-table knowledge directly to division.
		40 divided by 4 is 10. Use a bar model to support understanding of the link between times-table knowledge	$I \times I0 = I0$ $2 \times I0 = 20$ $3 \times I0 = 30$ $4 \times I0 = 40$ $5 \times I0 = 50$ $6 \times I0 = 60$ $7 \times I0 = 70$ $8 \times I0 = 80$ I know that 3 groups of 10 makes 30, so I
	<i>4 groups of 5 cars is 20 cars in total.</i> <i>20 divided by 4 is 5.</i>	and division. 60 10 10	know that 30 divided by 10 is 3. 3 × 10 = 30 so 30 ÷ 10 = 3

Power Maths calculation policy
